

A HOLISTIC PROJECT MANAGEMENT SOLUTION SET

A complete project management solution set should offer complete nationwide coverage, streamlined costs, and speed to market alongside subject-matter expertise.

Our comprehensive solution allows our team of experts to provide management in:

- **Branch opening, closure, or relocation** – When it comes to successfully opening or relocating a branch, we know realistic timelines, precise detail management, and effective communication are the keys to making your branch changes as seamless as possible.
- **IT asset installation or disposition** – Upon arrival, an inspection ensures all necessary components and certificates are in place. When installing, the equipment is offloaded, placed into position, and leveled for the final setting. At the time of its disposition, our team de-installs, packages, and seals your assets before shipping them to one of our facilities located across the country.
- **Asset transportation** - Tellerex utilizes a fleet of modern delivery vehicles ensuring your equipment arrives at our site, on time, and in the best condition possible. We have the necessary equipment and experience to perform any custom or complicated rigging job.
- **Inventory management** – Tellerex maintains a state-of-the-art inventory management process and secure storage facilities located across the U.S.
- **Construction** – Tellerex partners with licensed general contractors, with capabilities to tackle any asset-related construction needs you may have. This includes any service from storefront modifications to branch buildouts, including all electrical, voice, and data requirements.
- **Preventative maintenance** - With our proactive approach to site and equipment maintenance, you're able to protect your investment in the equipment, as well as your image. From cleaning and touchups to complete refurbishing, we can provide cost-effective solutions.
- **Branding and custom printing** – ATM fascia scratched? We use high-quality paints and decals to make it look as good as new. Fabricating custom systems to your exact specifications is our strength.
- **Full refurbishment services** - Refurbishment solutions provide your customers with like-new technology at a fraction of the cost. Our team submits an estimate for all refurbishment work for your review and approval before the work begins.
- **Site surveys and design** – A new project starts with the site survey. We partner with you to conceptualize the project and capture critical information to develop the scope, budget, and any regulatory compliance. Our full-service design team provides renderings of proposed solutions to ensure team alignment.

And, we manage all of this through SPOTLight PM, our secure cloud-based project management portal offers complete visibility with a project dashboard, document and photo-management, and customized reporting. These tools, all updated in real-time, are designed for full transparency and efficient data sharing.
